The Solution You Can Trust

ThreatDown vs Kaspersky

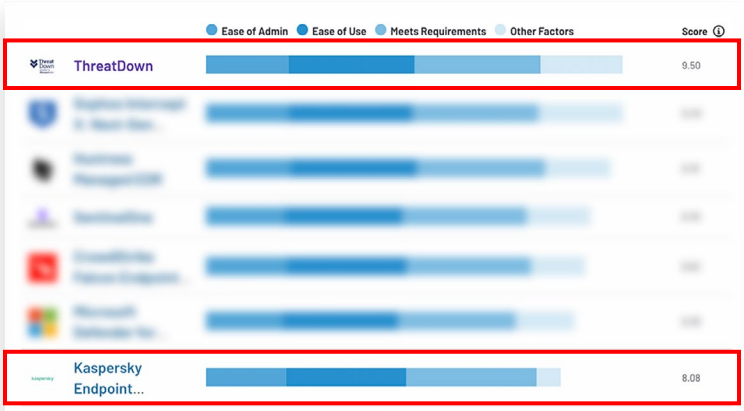
In an uncertain world, you need an endpoint security solution that you can rely on. ThreatDown offers powerfully simple endpoint security solutions that you can trust to take down threats, take down complexity and take down costs.

Head-to-head comparison

	ThreatDown	Kaspersky
Ease of management	Single user console and a single lightweight agent for managing all ThreatDown solutions.	Customers complain about Kaspersky's lack of visuals and difficulties in managing the software; Kaspersky is not investing much in improving its UI.
Efficient, single agent	Single lightweight agent optimizes security and productivity.	Customers report that Kaspersky's agent is too heavy and it slows down the machine significantly.
Automated deployment guidance	Security Advisor (included for all customers) offers a security score that reflects the current state of the deployment, guidance on improvements and provides the ability to make the changes.	Does not offer any kind of automated guidance on the current effectiveness of a customer's deployment or how to improve. Users also report that product documentation is poor.
Recover files from a ransomware attack	Ransomware Rollback returns files back to their pre-attack, healthy state up to 7 days after the ransomware attack, even recovering encrypted files.	Kaspersky does not recover files attacked and encrypted by ransomware.

Take threats down

- ThreatDown received EVERY award, 10 quarters in a row by global independent testing lab MRG Effitas
- Only vendor to consistently achieve 100% protection against ransomware, phishing, exploits, and every other test
- Awarded "Product of the Year 2024" by AV Labs for blocking 459/459 of "in-the-wild" malware samples and a "TOP Remediation Time" award



ThreatDown EDR ranked #1 on the Usability Index, with the highest score of all vendors. Kaspersky scored 8.08, compared to ThreatDown's 9.5.

Take complexity down

Kaspersky

- Built for large organizations that have their own Security Operations Center and large, security teams
- User interface is difficult to navigate and dated
- Hefty memory and data requirements degrade system performance
- Rule conflicts with other firewalls

ThreatDown

- Deployed in minutes, easy to navigate, no fine-tuning needed
- One, lightweight agent
- Includes Security Advisor score and prioritized actions
- G2 named ThreatDown EDR "Most Implementable," "Fastest Implementation," and "Easiest to Use"

Take costs down

Multiple tools cost budget and resources to manage. ThreatDown Bundles provide a single, all-in-one solution that includes Application Block and Vulnerability Assessment for free.

Although Kaspersky rolls back some malware actions, it does not recover files. Customers are left in a lurch to manually perform that time-consuming process. ThreatDown's 7-day ransomware rollback solution can restore files on workstations up to 7 days after a ransomware attack, saving valuable resources.

Get started today

Not all cybersecurity vendors are created equal. ThreatDown offers elite endpoint security without a complicated platform to manage.
